

clinical speech recognition

ACCURATE RESULTS IMPROVED EFFICIENCY

C-Speech is an innovative, efficient speech recognition solution that offers an affordable and secure alternative to traditional reporting. The application's excellent recognition accuracy expedites report creation, reduces the potential for errors, and allows clinicians to spend more time with patients.

PRODUCTIVITY GAINS

Integrating C-Speech into a clinician's workflow can result in up to 60 minutes per day saved on administrative tasks. C-Speech allows the user to dictate directly into EMRs, practice management systems, e-mail clients and other third party applications.

REDUCED COSTS

C-Speech can significantly reduce the costs associated with transcription by reducing the number of resources required to manually perform these tasks. Speech recognition is also beneficial in situations where transcription resources are scarce or unavailable.

INCREASED COLLABORATION

Eliminating transcription turnaround time results in the instant availability of reports to other healthcare professionals, broadening access to up-to-date patient information. The availability of current, accurate information can improve the quality of patient care and help healthcare organizations deliver better outcomes.
